Abstract

We introduce several local and global fixed-point theorems for multivalued mappings with a generalized Perov contraction. The results are based on Perov type fixed point theorems in spaces endowed with two generalized metric spaces. Then, we present a homotopy result for single-valued mappings with a generalized Perov contraction on a generalized metric space. Finally, we provide an application to a boundary value problem in a Banach space.

Mathematics Subject Classification : 54H25, 47H10, 47H04.

keywords : Multi-valued map; generalized metrics; fixed point, matrix convergent to zero.
